

WAGON LIFTS FOR STAGE SHOW IN LAS VEGAS

SPECIALTY SOLUTION #21

ENTERTAINMENT

- 20,000 lb capacity, hydraulic actuation, 144" x 432" platform area, 75" vertical travel
- Self-propelled scissor lift
- Auxiliary lock-up bars support up to 125,000 lbs.

Handling Specialty designed and manufactured two lifts used in the EFX show at the MGM Grand Hotel in Las Vegas. The lifts were custom designed and manufactured to be used to fill a large gap (24' by 36') in the current stage floor, when it was lowered to the basement area to be loaded with a scenery change. To fill the gap (to allow performers to continue the show), two 12' by 36' wagon lifts, which are stored under the stage floor, are rolled in from the side. When they meet, they rise 7' to create a new stage floor. Once the lowered lift is ready to be raised, the two wagon lifts roll back to the sides and the stage rises from the basement area and the stage is complete once again.
